MANUFACTURING IMPROVEMENTS APPLIED TO PICTUS FAMILY

WHAT:

In order to meet the forecasted increase of demand for CMOSM10 products (90 nm), we are going to put in place the following initiatives:

- 1) activate Crolles 12" plant as a second and high volumes manufacturing source beside Rousset R8 8". The above manufacturing plant activation has been already communicated through PCN APG-MID/13/7698 issued in March 2013.
- 2) introduce the CuPd wire bonding as an alternative to Au wire bonding.
- 3) activate Malta plant as a second and high volumes Assembly source beside Muar. The above manufacturing plant activation has been already communicated through PCN APG-MID/13/7972 issued in July 2013.

WHY:

Corporate Process Roadmap

On customer request the above mentioned PCNs has been split by product family keeping unchanged the overall Company strategy.

HOW:

Here attached are the qualification reports for the process test vehicles: FP50 (Pictus 512K) & FA80 (Andorra 4M cut3.0).

We forecast to complete the changes (qualification of the products in Crolles, CuPd wire bonding, Malta assy plant) by end of Q1/2014.

Traceability will be granted by ST system. A dedicated code marked on the parts will enable to distinguish between diffusion sites (see attached document).

See below list of relevant commercial products with the changes to be applied.

WHEN:

Sampling: on customer request starting December 2013

PPAP in April 2014

Production & shipment progressively from Q2 2014

1 RELIABILITY EVALUATION OVERVIEW

1.1 Objectives

Aim of this document is to report the reliability trials results of Andorra 4M Cut 3.0 qualification.

Andorra 4M cut 3.0 is processed in Crolles FAB using CMOS M10 (90 nm) technology and it is assembled in Malta-ST assy line for LQFP176 package with gold wire.

The M10 (90nm technology) process was qualified in Rousset R8 Fab in wk922 using three logic test chips and a Flash test chip as test vehicles. Andorra 4M cut 2.0 was qualified in Rousset in Q1 2011.

Considering that Andorra4M is the first M10 product with 6 metal layers and FLS Flash diffused in Crolles, no similarity with other qualified products could be considered.

The qualification exercise will be based on 3 diffusion lots coming from Crolles: assy reports required on all qualification lots.

The qualification exercise is in respect of Q100 rev G specification.

1.2 Conclusions

All qualification trials have been completed with positive results. Neither functional nor parametric rejects were detected at final electrical testing.

Parameter drift analysis performed on samples submitted to die oriented test showed a good stability of the main electrical monitored parameters.

Package oriented tests have not put in evidence any criticality.

On the ground of the overall positive results we can conclude that Andorra 4M cut 3.0 in LQFP176 can be qualified in accordance to AEC-Q100 Grade1 RevG.

2 TRACEABILITY

2.1 Wafer fab information

DIE FEATURES	
Diffusion Site	<i>Crolles 2</i>
Wafer Diameter (inches)	12
Process Technology	<i>CMOS M10</i>
Passivation	PSG - Nit UV
Die finishing back side	Lapped Silicon

2.2 Package outline/Mechanical data

LQFP 176	
Package Description	<i>LQFP 176 24x24x1.4</i>
Assembly Site	<i>ST KIRKOP – MALTA</i>
Die Attach material	ABLEBOND 3280T
Molding compound	SUMITOMO EME-G700LS
Substrate/Leadframe	LQFP 176L 24SQ RgAg
Wires bonding materials/diameters	WIRE Au 2N GPG2 D0.9

1 RELIABILITY EVALUATION OVERVIEW

1.1 Objectives

Aim of this document is to report the reliability trials results achieved on Pictus 512k Cut 3.4 and Cut 3.5 qualification exercise, in order to release the device to production volume in Crolles.

Pictus 512k is processed in Crolles2 FAB using CMOS M10 (90 nm) technology and it is assembled in Malta-ST assy in LQFP144 package.

Pictus 512k embeds the ST Flash module.

Considering that Pictus 512K is the first M10 product with 4 metal layers and ST Flash diffused in Crolles, no similarity with other products could be considered.

The qualification exercise is based on three diffusion lots of Cut 3.4 coming from Crolles2.

Pictus512k Cut3.5, diffused in Crolles, is qualified by similarity taking into account results achieved with Rousset silicon Pictus 512K cut 3.5 (RR003612AG6050), being a pure design fix independent on process transfer.

Package qualification has been run on one assembly lot using similarity with qualification done on Rousset silicon on Pictus 512K and Bolero512K products, considering that from Back End point of view the differences between Rousset and Crolles Fab have to be considered minor.

The qualification exercise for this new product is in respect of Q100 revG.

1.2 Conclusions

Qualification trials have been completed with positive results on Cut3.4. Neither functional nor parametric rejects were detected at final electrical testing.

Parameter drift analysis performed on samples submitted to die oriented test showed a good stability of the main electrical monitored parameters.

Package trials with Au-wire concluded with positive results.

Pictus 512k Cut3.5 is qualified by similarity without any additional trial required.

2 TRACEABILITY

2.1 Wafer fab information

DIE FEATURES	
Diffusion Site	<i>Crolles 2</i>
Wafer Diameter (inches)	12
Process Technology	<i>CMOS M10</i>
Passivation	PSG - Nit UV
Die finishing back side	Lapped Silicon

2.2 Package outline/Mechanical data

LQFP 144	
Package Description	<i>LQFP 144 20x20x1.4</i>
Assembly Site	<i>ST KIRKOP – MALTA</i>
Die Attach material	GLUE ABLEBOND 3280T
Molding compound	SUMITOMO EME-G700LS
Substrate/Leadframe	LQFP 144L RgAg
Wires bonding materials/diameters	WIRE Au 2N GPG2 D0.9

2.3 Final testing information:

PACKAGE FEATURES	
Electrical Testing manufacturing location	: <i>ST KIRKOP – MALTA</i>
Tester	: Teradyne J750

3 RELIABILITY PLAN AND TESTS RESULTS

3.1 Conditions

Room test temperature is 25°C
 Hot test temperature is 125°C
 Cold test temperature is -40°C

3.2 Tables entry legend

1	PAT Process Average testing	[AEC Q101]	Final result	IMPLEMENTED	
2	SBA Statistical Bin/Yield Analysis	[AEC Q102]	Final result	IMPLEMENTED	

4 REVISION TRACKING

Rev 1.1:

1. Added similarity for package trials in pag. 5,6
2. Added Package Assembly Integrity Test (Q100 Group C) table in page 9
3. Added die Fabrication Reliability Test (Q100 Group D) table in page 10
- 4.

Rev 1.0:

1. Package lot inserted in pag.4
2. Table of package trials added in pag.5,6
- 3: Cut 3.5 qualification strategy pag.3

Rev 0.6:

1. Format adjustment on header
2. Added Qualification ongoing statement (page 3)

Rev 0.5:

3. First document release with incomplete results available.

Rev 0.1: First document draft

SPC56 - M10 technology PCNs description

October 2013

SPC56 32 Bit - M10 90 nm

INDEX

2

LIST OF CHANGES

- Front End (wafer diffusion):
 - High volume manufacturing source activation: M10 process & product transfer from Rousset 8" to Crolles 12"
- EWS (electrical wafer sort):
 - Activation of second testing site in Rousset where not yet qualified
- Back End (assembly):
 - LQFP64/100 main source activation: package transfer from Muar to Malta
 - CuPd wire introduction

SPC56 32 Bit - M10 90 nm

APG – Microcontroller & ADAS Business Unit

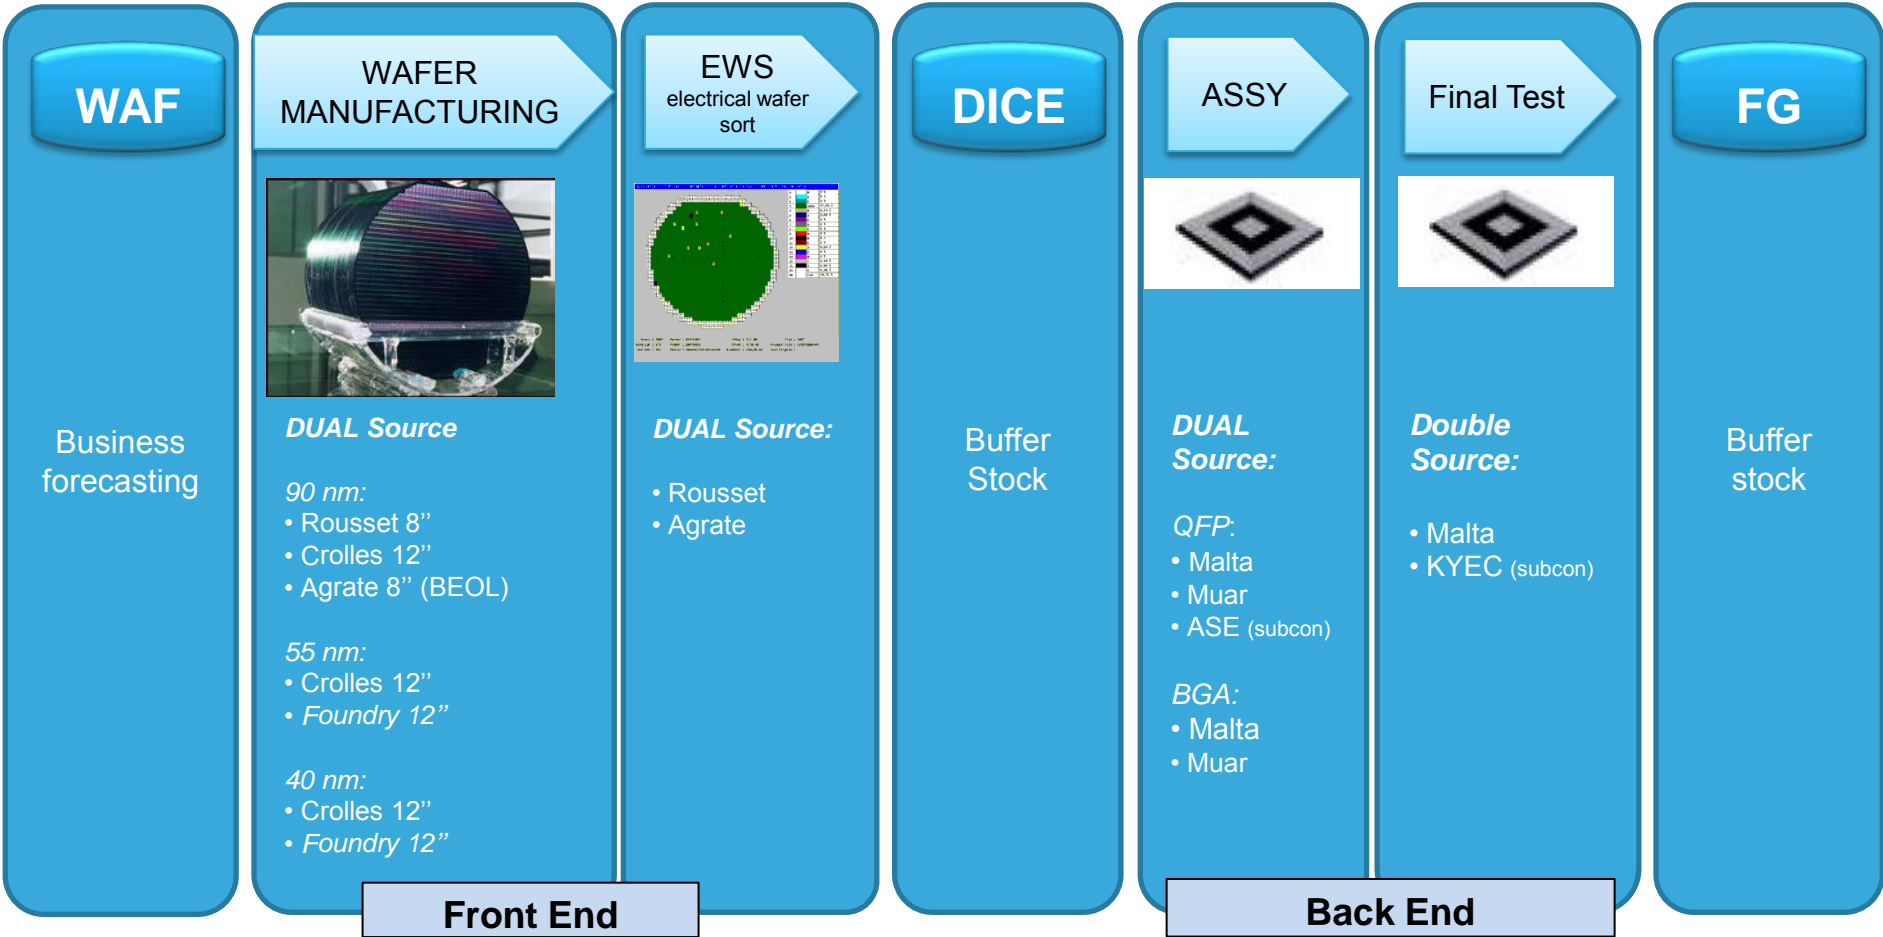

Main Locations Sites

A global competence network devoted to support digital solutions

SPC56 32 Bit - M10 90 nm Supply Chain structure

ST Manufacturing Strategy for advanced Automotive Microcontrollers is to use a main internal source and dual source capabilities (internal or subcon) to support large volumes, improve flexibility and secure business.

SPC56 32 Bit - M10 90 nm

ST Manufacturing sites - FE

Crolles (France) 8" & 12"

Rousset (France) 8"

Agrate (Italy) 8"

Catania (Italy) 6" & 8"

AMK (Singapore) 6" & 8"

Microcontroller manufacturing sites

Although ST manufacturing facilities are worldwide diffused, microcontroller manufacturing is concentrated in Europe where the highest level of engineering competencies is kept by the Company

SPC56 32 Bit - M10 90 nm

ST Manufacturing sites - BE

Although ST manufacturing facilities are worldwide diffused, microcontroller manufacturing is concentrated in Europe where the highest level of engineering competencies is kept by the Company

SPC56 32 Bit - M10 90 nm Manufacturing strategy

9

- ST new process and product introduction strategy is to focus and stabilize industrialization and first months of production in an internal wafer fab
 - Rousset R8 8" for 90nm eNVM process (M10)
 - Crolles 300 12" for 55nm eNVM process (M55)
- A second wafer fab is enabled and qualified when production ramp up has been completed in the leading wafer fab and sufficient volumes are foreseen
- M10 90nm process used for the SPC56 family in Rousset R8 is now mature. To support the very high volumes expected over the next years Crolles 300 has been qualified
 - Crolles 300 (12" wafers): M10 technology qualified. Two products already qualified.
Product qualification end by Q1 2013

SPC56 32 Bit - M10 90 nm Manufacturing strategy

Dual source strategy is applied inside ST on all technology families for automotive products thanks to in-house manufacturing capability

Secured Supply Chain

A true case study: ST managing Japan earthquake crisis

- ST vs our SUPPLIERS

- Crisis Management Team established at Corporate level
- Two main task forces: FE & BE
 - team members from Purchasing, Manufacturing, Quality, Planning
 - daily update to Corporate Management
- Communication to ST customers managed by PCN

- ***NO IMPACT ON ST DELIVERY***

- ST vs our CUSTOMERS

- ST directly involved by two major car makers to support with uC shipments as a back up for their Tier 2/3 impacted by Japan earthquake in Power Train and Safety related applications :

- 1st extraordinary delivery after 5 weeks from 1st contact
- 50% of customer run rate demand reached after 10 weeks
- **100% of customer run rate demand scheduled after 15 weeks**
- **NO CUSTOMER RETURN AFTER 3 YEAR AND 1M pcs SHIPPED IN THE FIRST YEAR**

Embedded non-volatile memory

Technology & Manufacturing Challenges

- Change in eFlash technology development & manufacturing environment
 - Very few companies in the world able to develop & manufacture eFlash
 - Stand-alone NVM manufacturers more and more separated from eFlash manufacturers
 - Very few Auto eFlash MCU supplier keep in-house production capabilities

“Nano2017” R&D Program Announced at STMicroelectronics’ Crolles Site

Five-year strategic R&D program led by ST to further advance the company’s leadership in key embedded processing solutions and technologies

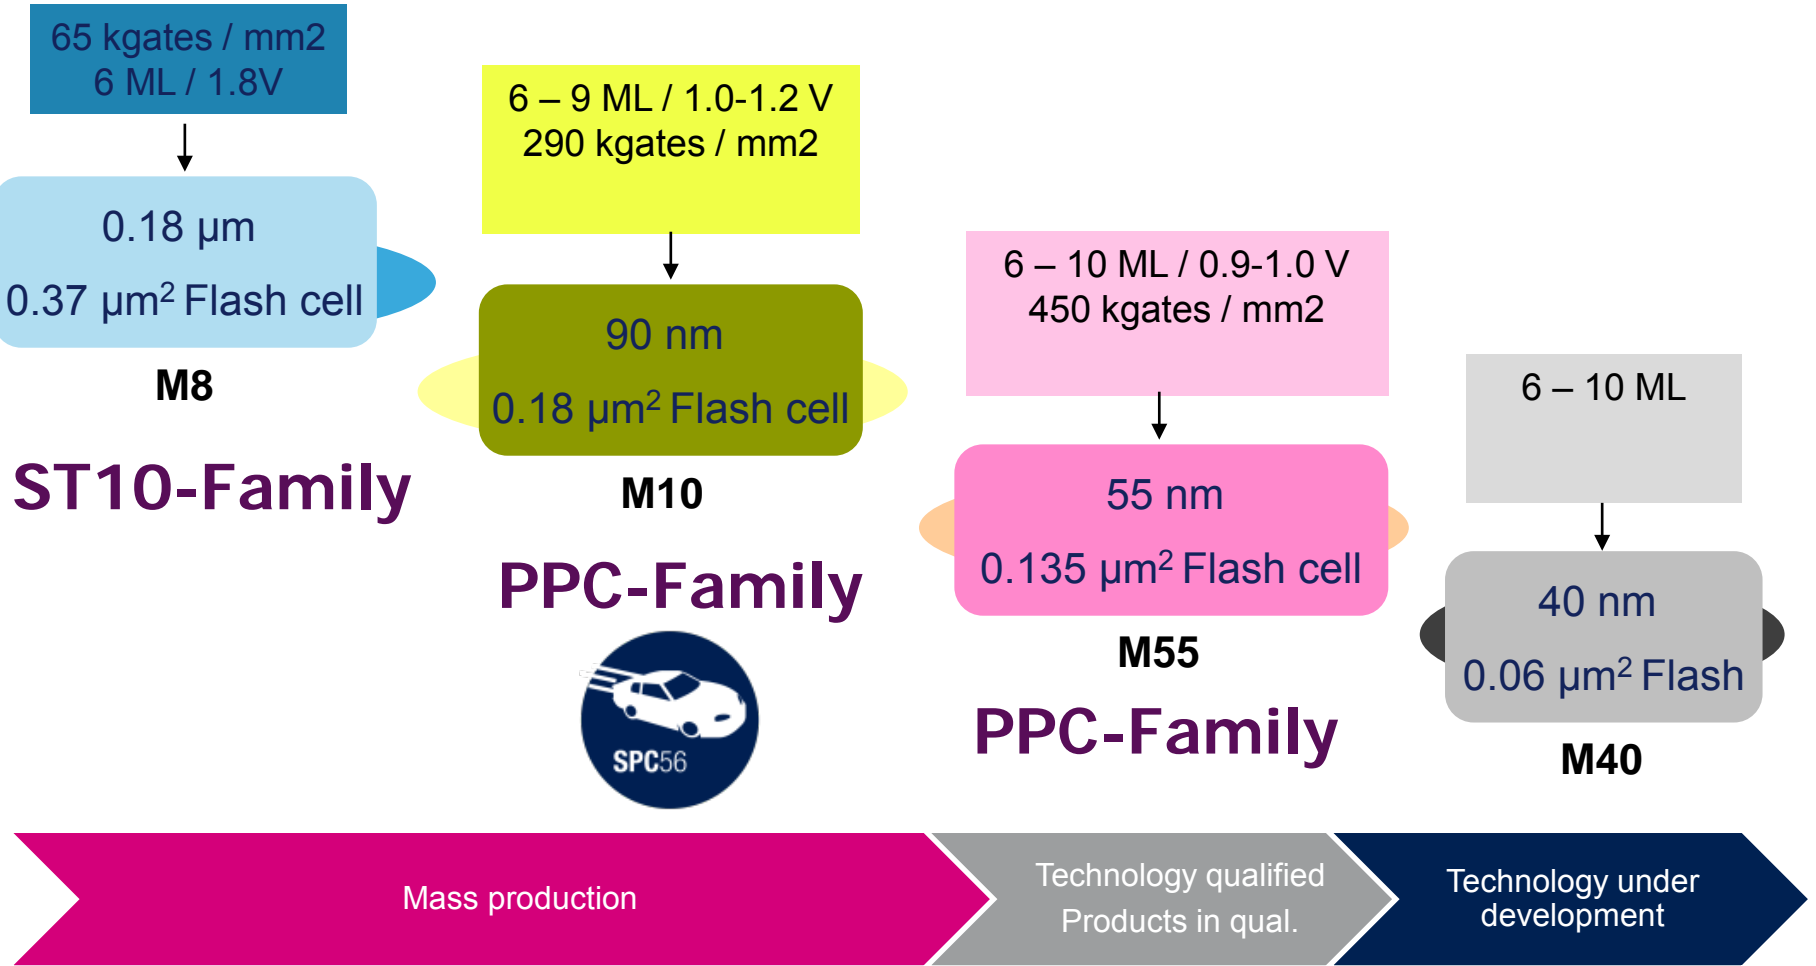

ST recently announced a dedicated investment plan for Crolles 12” (C300) wafer fab

SPC56 32 Bit - M10 90 nm

Leadership in embedded flash technology

ST has been a major player in the stand alone flash memory market prior to integrate them inside MCU device
 ST is a global player in embedded MCU since 25 years over three different technology node: M6Y, M8, M10

SPC56 32 Bit - M10 90 nm Crolles300 : Facilities

LQFP 100 (14x14) ULA / 144 (20x20) / 176 (24x24) volume production

Kirkkop: current production site for high pin count QFP & BGA *BGA 15x15 / 17x17 / 23x23*

LQFP 64 (10x10) / 100 (14x14) volume production

Muar

BGA 15x15 / 17x17 / 23x23

LQFP 64 (10x10) / 100 (14x14)

Muar

LQFP 208 (28x28)

SPC56 32 Bit - M10 90 nm

LQFP64 / 100 dual Source Back End

33

- ST has successfully executed the first step of its manufacturing strategy for assembly with the industrialization and ramp-up of SCP56 family in Malta (QFP high pin count: 100, 144, 176 pins) and Muar (QFP low pin count: 64, 100 pin)
- With the projected growth of SPC56 production volumes and to secure Customer deliveries in case emergency situations, ST is now aggressively qualifying and ramping-up production of:

LQFP64 (10x10) & 100 (14x14) in Malta

- Process has been qualified
- ST will introduce CuPd wires on some of its packages

SPC56 32 Bit - M10 90 nm

Similarity for Product Family

LQFP100 (14x14)

- Package already qualified and in production on FL60 (Leopard 1M)
- FL60 Package reliability report is included in PCN.
- Similarity criteria (defined by an ST specification: ADCS 7028386) for package qualification have been verified and met.
- FL60, FP40, FP50, FP60, FB50 and FB64 microcontrollers belong to the same product family.
- LQFP-100 14x14 Package qualification in Malta using FL60 is extended to FP40, FP50, FP60, and FB50 and FB64 microcontrollers.

SPC56 32 Bit - M10 90 nm

LQFP64 / 100 dual Source Back End

LQFP64 (10x10)

- Dedicated qualification exercise based on available similarities

Trial	Conditions	Samples x Assy Lot
HTOL	1k cyc @ 125°C + 168hrs HTOL@125°C (1000hrs monitor)	77 x 1
ELFR	BI + 24hrs	800 x 1
TC	1000cyc -50°C/+150°C	77 x 3
AC	96h	77 x 3
THB	1000h 85°C/85%	77 x 3
HTS	1000hrs@150°C	77 x 1
CA	---	on 3 assy lots

Copper wire qualification

SPC56 32 Bit - M10 90 nm

Cu wire qualification

37

- CuPd wire will be used in M10 products
- Qualification exercise has to be run both on 4 metal and 6 metal option
- Similarities can be used evaluating bonding parameters and bill of material between:
 - 4 metal products (Pictus, Bolero)
 - 6 metal products (Andorra, Monaco, Leopard, Bolero 3M)

SPC56 32 Bit - M10 90 nm CuPd qualification status

- 6 metal process option

- Mat 10 (feasibility assessment) done
- Mat 20: three assembly lots with bonding corner conditions running
- Mat 30 for 6M1T process option running

Similarity between LQFP176 and LQFP144 packages:

- Same complexity from process point of view, both are 6M1T
- Same pad class and same Bond Pad Opening = 52um
- Same assembly line
- Line stressing planned on 30K parts to assess manufacturability

- 4 metal process option

- Mat 10 done
- Mat 20: three assembly lots with bonding corner conditions running
- Mat 30: three assembly lots in standard bonding condition running
 - Line stressing planned on 30K parts to assess manufacturability

- Samples

- On customer request starting from

Q4 2013

4 Metal M10 Products in LQFP: QUAL PLAN for CuPd introduction

Products	LQFP Packages	Qualifications	Comments
